

FREUDENBERG HEALTHCARE VALUE STORIES

A CLASS OF ITS OWN – THE NEW GENERATION IN PU FOAMS

Hydrophilic polyurethane foams have become an indispensable part of wound care and offer numerous advantages in advanced wound dressings. Thanks to their soft and flexible structure, they adapt perfectly to the wound bed. They effectively absorb wound exudate and promote a moist environment, which accelerates healing and minimizes the formation of scars.

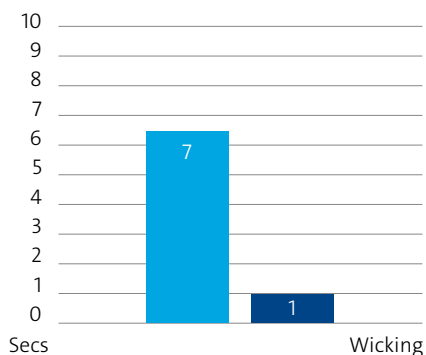

With its new generation of foams Freudenberg offers significant performance benefits over current state of the art formulations.

Rapid wicking and outstanding fluid handling make the new generation a class of its own: The excellent fluid handling allows thinner foams to be used giving more wearing comfort.

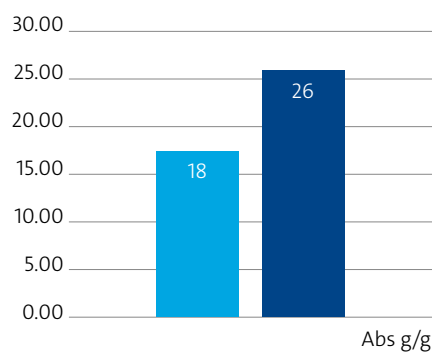

CUSTOMER VALUE

- Soft and conformable
- Outstanding fluid handling
- Superior absorption
- Excellent retention
- Higher strength wet & dry
- Fast Wicking

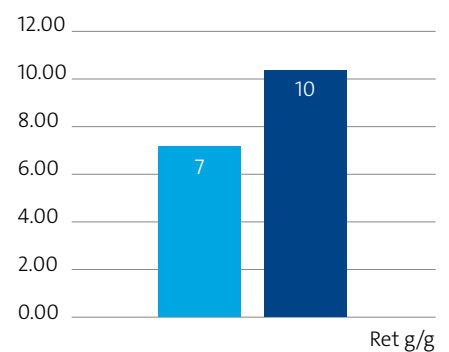

1012 vs. New Gen Wicking speed

Absorption g/g

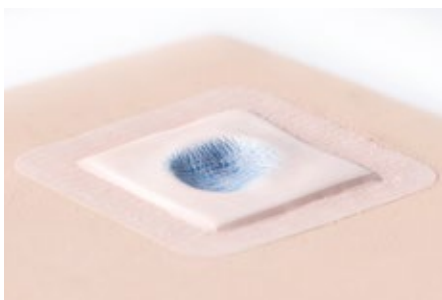

Retention g/g

■ 1012 ■ New Gen

Possible combinations with e.g. films, enable our customers to provide the market leading solutions for challenging applications.
